

GREAT VALUE, GREAT RESULTS – You be the judge!

Improving your seed strike rate with better seed to soil contact, moisture retention and compaction – This is what we're all about at Taeges!

"I tell you what; I'm that impressed and pleased with my Taege drill and tyre roller that I'm happy to take phone calls from anybody who has any questions about them."

FRANCIS HAMMOND
Canterbury

"I first purchased my Taege twin row tyre roller and was running that behind my previous drill. Now with the combination of that and the Taege tyne harrows behind the Taege drill, in the areas that are getting minimal moisture I am getting a better strike rate because of improved seed to soil contact. The roller isn't heavy to pull and doesn't have a lot of sideways pull on the drill."

PETER GOW
Belmont Station

Offset rows of tyres with gaps

- Eliminates bow wave when used in cultivated soil, achieving better levelling.
- Allows for effective removal of pugging in soft, wet and muddy conditions.
- Significantly reduces sideways drag on towing implements, with easy steering.
- No scuffing when turning in tight circles.
- Taege tyre rollers complement what we achieve with the tips, tynes and harrows – giving you the best result for your seed.

**MORE EFFICIENT.
BETTER YIELD.
MORE CHOICE.
BETTER QUALITY.**
